

Kingsley Machine Hot Foil Stamping Pencils:

Kingsley Machine Company made two styles of Pencil Attachments. This is a showing of the Kingsley Machine Co. Pencil Attachment that came with our equipment. This is the better of the two that were made.

Clamp the attachment to the base of the machine using the thumb screw at the right side.

To line up the attachment so the type prints centered on the pencils, place a type holder full of type in the machine, then bring the type down and Look from the side to see if the type is centered over the pencil. If not, move the attachment forward or backward as required. When it is correct use the Allen Cap screws to lock in the position, by moving the screw in the front in till it contacts the base plate then use the Allen screw that is perpendicular to lock the position. Now your ready to go each time.
